

Energy Switch

Energy Saving Switch

Durable and reliable energy switches at competitive prices. These energy switches disconnect electrical equipment and air-conditioning when guests are not in the room for substantial energy savings. Courtesy timer switches give guests time to leave the room before turning the lights out. An LED lets guests know their key card has been recognised. Set to only work with the key cards.

Technical Data

- Working voltage 220—240V AC
- Max Load Current 20A
- Idle Power Usage 10mA
- Finish ABS
