

# Guardian Pass

## Electronic Locks

The Guardian Pass are a simple to use range of secure and reliable hotel door lock technologies. The locks provide complete audit trails of entry into the room. They are available in modern or antique styling with gold or brushed stainless finishes. Choose between Smart Card or the latest RFID card technology, with plug and play card Programmer and Windows based Lock Management software.

## Operation

A green light indicates a successful open and a red light a wrong or faulty card. All card operated locks come with a conventional key back-up facility.

Choose between our long time favourite SMART cards or the increasingly popular RFID cards.

RFID means you do not need to insert the key card into the door. Benefits are:

- Low cost guest cards that are easy to use
- Long life span of staff cards
- No need to clean the readers
- Sealed readers are less susceptible to damage and vandalism
- Compatibility with other near field communication technology (NFC) key fobs, wristbands and some cell phones

## Antique

Quality finishes and high precision engineering lift the elegance of any hotel room.

Choose between modern or antique styling that fits your hotel. The brushed stainless or gold finishes don't mark with fingerprints and are easy to keep clean.

Locks are available for a broad range of door thicknesses and mortise depths.

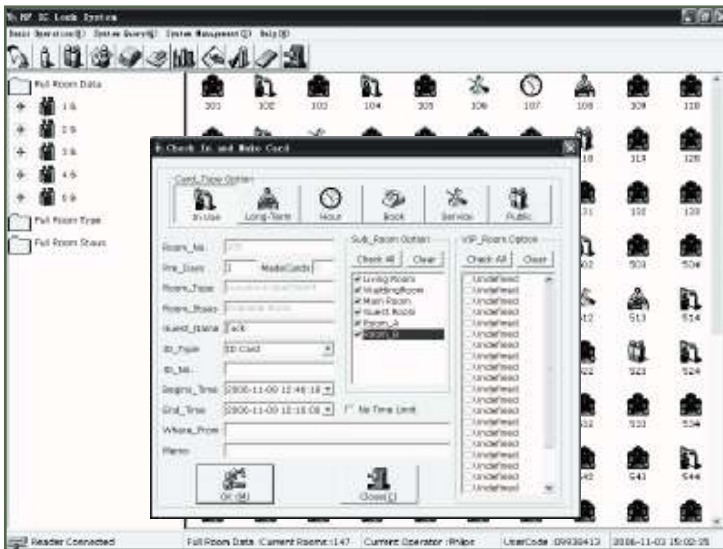

## Modern

# Guardian Pass

## Lock Management Software

The Lock Management Software is Windows based and can be set up on a local pc or server. The icon based system makes managing hotel key cards quick and life easy for the front desk staff. The software requires a user and password to logon and keeps audit trails of all card management activity.

The software makes it easy to manage the hotel cards by time, zones, user level and type. It also helps maintain an accurate room status allowing you to check-in and make up cards rapidly. Group check-ins and room change functions help efficiency.

## Encoder and Programmer

RFID and SMART card encoders connect by USB to your PC. Small discrete devices take little space on the front desk and give full functionality to the Lock Management Software.

The small portable handheld Programmer makes for hassle free setting up of doors and downloading audit trail records.

## Technical Data

- Reader either RFID (MIFARE 13.56MHz, TEMIC RF 125KHz) or Smart Card
- Power Supply DC4.5V-6.5V, 4 x 1.5V AA alkaline batteries
- Battery Life over 10,000 uses
- Panic release included as standard
- Optional Mechanical Override
- Memory flash RAM
- 600 event audit trail
- Passage Mode and auto unlock/lock
- ISO9001, C-tick, RoHS compliant
